Lack of Engineering in Façade Repairs

Presented By: Building Restoration, Inc.

International Concrete Repair Institute Annual Conference

11-14-2013

Tonight's Learning Objective

- Why are we seeing these failures.
- What is being done to repair them.
- Why are we doing it wrong? Or at least not right!
- What is the driving force in the repair decisions.
- Who should be doing what.
 - Owner
 - Engineer
 - Architect ??????
 - Contractor

What is our criteria?

- Age of the structure.
- Height.
- Depth of the owners pockets.
- How badly we need the work.

Façade Types:

- Participating
- Non-Participating
- Composite compatible
- Composite non compatible
- Non Composite

What assumptions would you make?

The real cost

 If the owner will not accept the cost for us to REALLY look at the building.

Are we still going to accept the liability?

Future Maintenance

 Once the repairs are complete, it is strongly suggested that you provide the owner with a maintenance schedule. This can also be in the form of a re-inspection schedule. Since many owners consider the repairs that have taken place as final. The engineer needs to protect their liability by ensuring that the facility owner is aware that no repair is permanent and needs to be maintained.

Mortar

- Was the mortar laid as a face bed or full bed?
- Any additives used?
- How were the anchors laid?
- What are the anchors bedded into?
