ADHESIVES AND PLASTICIZERS

B.R. Wood, LLC. 419 South Glenwood Avenue Dalton, GA 30721 Phone: 706-278-1341 Fax: 706-278-6207 Email Address benny.wood@aatglue.com

INDUSTRY STATISTICS

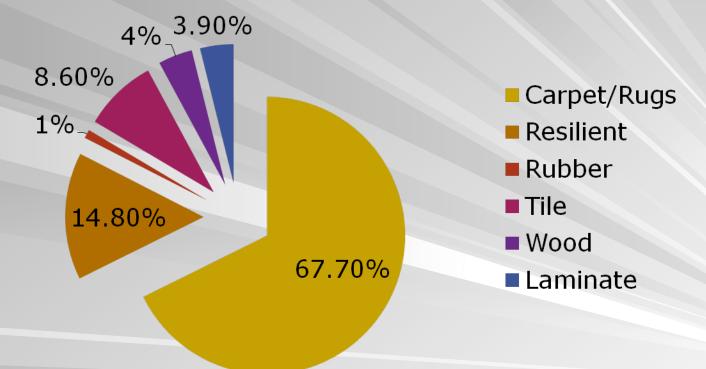

Share

Share

(by category)

19.67 Billion Square Feet

Residential Sales vs. Commercial Sales

Commercial 32%

Residential 68%

WHAT ARE ADHESIVES???

- Multipurpose Adhesives
 - a. Display of ingredients
 - b. Sample of products
 - **Pressure Sensitive Adhesives**
- Permanent
 - a. Vinyl d. Wood
 - b. Rubber e. etc.
 - c. Linoleum
- Polyurethane
 - a. Solvent
 - b. Moisture Cure
 - c. Cross-Link
 - Ероху
 - a. 2 Components

ADHESIVE MANUFACTURING AND DESIGN

1. CONVENTIONAL ADHESVIES

a. Non-Environmental

2. ENVIRONMENTAL ADHESVIES

- a. Proposition 65
- b. Green Label
- c. Green Label Plus
- d. Green Guard
- e. LEEDS

THE ADHESIVE KILLER

THE POWER OF HYDROGEN pH – WHAT IS IT AND HOW DO WE TEST FOR IT

pH is a measure of the acidity or alkalinity of any water soluble substance. The ph scale runs from 0-14 where 0-6.9 is acid, the lower the number the more the acidity. 7.1-14 is alkaline and in this case the higher the number the more alkaline or caustic the product. The mid point of the scale (7.0) is neutral and therefore is neither acid nor alkali.

EFFECTS OF VARIOUS ADHESIVES ON LONG TERM PERFORMANCE. RUBBER - WATER - SUBSURFACE

EPOXY & MOISTURE (MVE)

WHAT IN THE WORLD IS PLASTICIZER AND WHY DO I CARE?

Plasticizers are generally colorless liquids with a very slight "plastic" odor. Plasticizers are used to convert PVC (polyvinyl chloride), a rigid plastic, into a soft, flexible , and elastic material suitable in use for various manufacturing processes.

CHEMICAL DEGRADATION NOT ALKALI/WATER

Q & A
